COMPANY PROFILE

LAC, s.r.o. has been a successful manufacturer and seller of industrial furnaces, dryers and refractory castable shapes for three decades. It operates both on domestic and foreign markets. Since its foundation in 1992, the company has developed into a leading global manufacturer and has delivered as many as 20,000 furnaces and dryers. The products are used in many technological processes of heat treatment, especially:

- heat treatment of ferrous and non-ferrous metals
- alloy technologies for non-ferrous metals
- heat treatment and chemical- heat treatment metal processing
- low-temperature applications
- laboratory technologies
- production of industrial and hobby ceramics

The LAC manufacturing program includes the manufacture of a complete standard range of furnace and dryer lines, and also accommodates the individual requirements of the customer through the design and manufacture of customized furnaces tailor-made to meet customer specifications. The LAC development and design office works in tandem with a team of service technicians to ensure quality service to customers and pave the way for future company growth. Progress in technological development is proven by orders for the automotive, aerospace and defense industries that meet the demanding standards of AMS 2750 E, NADCAP, CQI-9. In 2018, the construction of new LAC complex in Židlochovice worth CZK 220 million was completed. Investments in the form of a new furnace and dryer production hall and office space allow us to streamline the production process and produce even higher quality products for our customers.

A significant part of the LAC business is the manufacture of refractory castable shapes, the bulk of which are used in the manufacture of industrial furnaces. Refractory castable shapes are also used by metallurgy companies and manufacturers of boilers for burning wood, pellets, and biomass. The investments in the extension of the premises for production of refractory castable shapes at Hrušovany nad Jevišovkou have reached a total of CZK 67 million.

The company also supplies heating elements, refractory and insulation materials, regulating elements, and reconstruction of furnaces, heating systems and switchboards to its customers.

6 custom projects per month Almost 20,000 furnaces manufactured We deliver to 35 countries worldwide

INSTRUCTIONS FOR USE OF THE CATALOGUE:

You can find the demanded furnace using the table on page 14.

- 1. Look up for a material type.
- 2. Look up for a type of material heat treatment.
- 3. The last column contains a type of a suitable furnace together with page number.
- 4. After turning to the page with the required furnace type, select the dimensions of your platform from the table and you will see the recommended furnace size.
- 5. Contact the LAC sales representative who will prepare a quotation for the furnace and other accessories for you.

Additive Manufacturing (AM)

Additive Manufacturing represents a huge potential. It brings about higher efficiency and reduces costs at production, testing and introducing new products. This technology allows production of 3D products even with a very complicated shape. Objects or products are created on the basis of digital 3D models or other electronic data sources. Application possibilities of 3D printing seem to be unlimited when taking into consideration progressive development of this technology.

WHAT IS THE ADDITIVE MANUFACTURING?

Additive Manufacturing designates the process at which a product is created by progressive applying thin layers of material on each other (plastic, metal, concrete, ceramic, tissue ...). Additive Manufacturing is basically the same as 3D printing, however, there is a substantial difference in that the term Additive Manufacturing means a process at which a final product is created rather than a prototype.

(source: Encyklopedie 3D tisku, www.3D-tisk.cz)

ADDITIVE MANUFACTURING TECHNOLOGY

Additive Manufacturing is a general designation of all various methods of 3D printing. E.g. by plastic fibre melting, sintering plastic or metallic powder materials, etc.

Examples of the types of 3D printing technologies:

- FFF (or FDM) printing of functional models with molten plastic
- SLA (or DLP) photosensitive resin curing
- SLS plastic powder laser sintering
- DMLS metallic powder sintering
- Solidscape wax model printing
- ProJet printing of fragile full-colour models from powder
- Mcor printing of fragile full-colour models from paper

Our furnaces are designated for all the technologies listed below, for metal processing – melting or sintering of metallic powders or fibres which do not contain additional binders.

Furnaces are designed for heat treatment after previous additive types of charge production. If you use another type of 3D printing or if your technology is not listed above, contact the LAC sales department where they will recommend you the corresponding equipment.

PP chamber furnace

The chamber furnace for heat treatment of 3D components produced by additive manufacturing technology which will ensure a process for correct metallurgical properties of metallic alloy. The furnace with ideal temperature distribution and forced air circulation offers suitable conditions for annealing, soft annealing, hardening, tempering and artificial ageing.

Processed material type:

Aluminium

ALUMINIUM COMPONENTS

Aluminium components produced by the AM technology are processed at a temperature between 150 °C and 650 °C.

The PP chamber furnaces up to 650 °C with forced air circulation and ideal temperature distribution are suitable for pre-heating, artificial ageing, annealing and internal stress relieving.

Examples of platform max. dimensions (mm)	Furnace type
100x100	PP 20/65
250x250	PP 40/65
300x300	PP 70/65
400x400	PP 140/65
550x550	PP 270/65
650x650	PP 540/65

Furnace type	Tmax	Tmax for long-term operation	Volume	External dimensions (w×h×d)	Internal dimensions (w×h×d)	Number of shelves	Input*	Weight	Protection**	Voltage	Max. floor load
	°C	°C	I.	mm	mm	pcs	kW	kg		V	kg
PP 20/65	650	600	20	800×650×1000	300×200×350	-	3,0	130	16/1	230	30

* Fan motor power of the PP 20 is 0,25 kW. For PP 40-140, all temperatures, and PP 270/65 it is 0,37 kW and for model PP 270/85 and PP 540, all temperatures, it is 1,1 kW.

** Protection may vary according to the optional accessories selected.

STANDARD FURNACE EQUIPMENT

- Ht205 controller
- Stainless steel muffle
- Stainless steel circulation insert with long service life
- Horizontal internal atmosphere circulation
- Heating elements located outside the furnace space
- 2 stainless steel shelves (except for the PP 20)
- Manually controlled ventilation flap for cooling the furnace's operational space
- "K" type thermocouple
- Contactless switching relay for noise-free operation
- Limit switch for safe opening of the furnace
- Door manually opened towards the side
- Tabletop (PP 20) or free-standing variant (other types)

OPTIONAL ACCESSORIES AVAILABLE FOR AN EXTRA CHARGE

- Intake of protective atmosphere (manually or automatically controlled gas intake)
- Semi-gastight furnace variant (with a special ventilation chimney)
- Digital temperature recorder (controller and recorder are located in custom control panel on side of furnace)
- Automatic ventilation flap for cooling the furnace's operational space
- Optimisation of the temperature field for DIN 17052-1 ΔT 10 °C in the internal usable space (in an empty furnace at Tmax)
- Measuring loop calibration
- RS-485 or LAN interfaces including software and cabling
- HtMonit EV set (include furnace monitoring software + interface)
- Custom stand
- Door opening to the left or right (hydraulic sliding, pneumatically controlled)
- Additional shelves
- One-handed opening (for models PP 20 through PP 140 inclusive, this is standard equipment)
- Controlled or uncontrolled forced cooling (cannot be combined with the semi-gastight furnace version)

High-strength Steel

Stainless Steel

Cobalt-Chromium

up to 850 °C

STEEL COMPONENTS AND COBALT-CHROMIUM ALLOYS

Steel components and nickel and cobalt-chromium alloys produced using the AM technology are processed in protective atmosphere at max. temperature 850 °C.

PP furnaces up to 850 °C are suitable for thermal processing of metals such as annealing, solution annealing, soft annealing, tempering and hardening. It is possible to change a standard furnace into the variant with protective atmosphere intake by using a protective gas box.

Examples of platform max. dimensions (mm)	Furnace type
100x100	PP 40/85

STANDARD FURNACE EQUIPMENT

- · Gas box with protective atmosphere automatic intake
- Ht205 controller
- HtMonit set (include furnace monitoring software + interface)
- Automatically controlled protective atmosphere intake for single type of gas (one flow meter)
- "K" type control thermocouple + Ht40B displaying unit
- "K" type charge thermocouple + Ht40B displaying unit
- Furnace control switching between the control and charge thermocouples
- Door controlled manually opening towards the right-hand side
- One shelf (for PP / 650 °C)
- Manually controlled ventilation chimney
- Free-standing variant
- Stainless steel muffle
- Stainless steel circulation insert with long service life
- · Limit switch for safe opening of the furnace

OPTIONAL ACCESSORIES AVAILABLE FOR AN EXTRA CHARGE

- HtMonit EV set (include furnace monitoring software + interface)
- Three- or four-colour beacon
- Automatic intake and exhaust flap (recommended)
- Manual intake and exhaust flap
- Controlled/uncontrolled vacuum forced cooling
- Circulation fan adjustable speed
- Door manual opening upwards
- Automatic door opening (pneumatic)
- Door opening towards the left
- Door electric lock
- Switchboard cooling
- Roller track
- Optimisation of the temperature field for DIN 17052-1 ΔT 20 °C in the internal usable space (in an empty furnace at Tmax)
- Digital temperature recorder (controller and recorder are located in custom control panel on side of furnace)
- Pulling out hook with length of 750 mm or 1000 mm
- Protective atmosphere automatic intake for two different quantities of gas (two flow meters) it is recommended
- Charging trolley
- Cooling table

Protective atmosphere automatic intake

Ventilation chimney, automatic flap

K chamber furnace

The chamber furnace for heat treatment of 3D components produced by additive manufacturing technology which ensures a process for correct metallurgical properties of metallic alloy. We design the chamber furnaces as very durable equipment for hardening, annealing, solution annealing or internal stress relieving under protective atmosphere. Heating from five sides, meanwhile, is a guarantee of even heat distribution within the operating area.

Processed material type:

Stainless steel

) Nickel alloys

Cobalt-Chromium alloys

STEEL COMPONENTS, NICKEL AND COBALT-CHROMIUM ALLOYS

Steel components, nickel and cobalt-chromium alloys produced using the AM technology are processed in protective atmosphere at a temperature up to 1100 °C or up to 1300 °C without a box with protective atmosphere intake.

The K furnaces are suitable for heat treatment of metals such as e.g. annealing, solution annealing, soft annealing, tempering, curing and internal stress relieving. It is possible to change a standard furnace into the variant with protective atmosphere intake by using a protective box.

Examples of platform max. dimensions (mm)	Furnace type

Protective gas box

Programmable PID Ht205

Ventilation flap

PKRC gastight chamber furnace

up to 950 °C

Gastight furnaces with internal atmosphere circulation for precise temperature distribution. They are used especially for heat treatment of materials in the defined protective atmosphere (argon, nitrogen, moulding gas etc.) even with low consumption of protective gas up to max. temperature of 950 °C. Above all annealing, tempering, curing, internal stress relieving, etc. are included.

Processed material type:

Titanium

Nickel alloys

TITANIUM AND NICKEL ALLOYS

Titanium parts manufactured by AM technology, which are processed in a protective atmosphere at temperatures up to 800 $^{\circ}$ C. AM nickel alloys processed to relieve stress at 890 $^{\circ}$ C.

PKRC furnaces are equipped with a hot-wall retort, protective atmosphere inlet and vacuum pump. They are suitable for heat treatment of metals and due to the circulation of the inner atmosphere they are characterized by excellent temperature distribution.

Examples of platform max. dimensions (mm)	Furnace type
200x200	PKRC 55/95
300x300	PKRC 180/95
300x500	PKRC 350/95

* Protection may vary according to the optional accessories selected.

** These dimensions are variable with respect to a retort circular cross section.

Subject to technical changes.

STANDARD FURNACE EQUIPMENT

- Ht205 controller
- HtMonit EV set (include furnace monitoring software + interface)
- Heating spirals on ceramic tubes outside the furnace's operational space
- Door sealing
- Manually controlled ventilation and suction flaps for cooling space outside of the retort
- Door manually opened towards the side
- Limit unit
- Automatically controlled intake of protective atmosphere for one type of gas (one flow meter)
- Manovacuometer for checking overpressure in the retort
- Vacuum pump for atmosphere exhaustion from the retort in cold conditions
- Adapter for connecting a G $\frac{1}{2}$ " rubber hose to the cooling of the collar
- Thermistor for checking the temperature of the flange and detection of coolant presence in the collar of the retort
- Overpressure safety valve for releasing protective gas from the retort with an overpressure of 4–6 mbar
- Ammeters for checking the state of the heating elements (numbers based on number of phases connected to the heating)
- "K" type control thermocouple + Ht40B displaying unit
- "K" type charge thermocouple + Ht40B displaying unit
- Furnace control switching between the control and charge thermocouples
- Contactless switching relay for noise-free operation
- Limit switch for safe opening of the furnace
- Free-standing variant

OPTIONAL ACCESSORIES AVAILABLE FOR AN EXTRA CHARGE

- Replacement retort made of refractory stainless steel
- Controlled forced cooling (cooling along a selected cooling curve)
- Automatic intake and exhaust flap (recommended)
- Optimisation of the temperature field for DIN 17052-1 ΔT 20 °C in the internal usable space (in an empty furnace at Tmax)
- Digital temperature recorder (controller and recorder are located in custom control panel on side of furnace)
- Second gas automatic supply
- Three-colour beacon
- Four-colour beacon with siren
